SHASHIDHAR

Associate Quality Assurance Engineer
Mysore, India+ 91 6363263318 | shashihiremath444@gmail.com | linkedin

SUMMARY

A Engineer with 2 years of experience testing backend-heavy SaaS applications, including functional, regression, and API testing for assessment and reporting modules. Skilled in identifying edge cases across data-driven workflows (quizzes, reports, user/group management) and collaborating closely with backend teams built on Node.js/Express and PostgreSQL. Hands-on exposure to AWS services (Lambda, CloudWatch, S3, API Gateway, SQS) used in the systems under test. Strong understanding of the full SDLC, with a growing focus on backend development and automation.

SKILLS

- **Backend:** Node.js, Express.js, RESTAPIs, JWT, OAuth.
- **Database:** PostgreSQL.
- **AWS Services :** Lambda, Step Functions, S3, API Gateway, SNS, SES, SQS, CloudFront, CloudWatch, Cognito, RDS.
- **Testing:** Selenium, Manual testing
- **API Testing:** Postman

WORK EXPERIENCE

Associate Quality Assurance Engineer **Jul 2024 - Present**
Excelsoft Technologies Mysore

- Performed manual and functional testing of core product modules (assessments, quizzes, reports, user/group management) to ensure feature reliability before release
- Designed and executed test cases and test plans based on requirement documents and user stories, covering positive, negative, and edge-case scenarios
- Conducted regression testing across releases to catch defects introduced by new features or bug fixes
- Logged, tracked, and prioritized bugs using [bug tracking tool — e.g., Bugzilla], working closely with developers to reproduce and resolve issues
- Performed API testing to validate backend endpoints, request/response contracts, and data integrity across services
- Verified data consistency and correctness across PostgreSQL-backed workflows, especially for reporting and analytics features
- Collaborated with backend developers to understand system architecture (Node.js/Express, AWS-hosted services), enabling more targeted and effective test coverage
- Participated in sprint planning, stand-ups, and release cycles, providing QA sign-off before production deployments
- Wrote and optimized SQL queries in PostgreSQL to support backend features, reporting, and data validation needs
- Worked with AWS services (Lambda, S3, CloudWatch, API Gateway, SQS) to support backend operations, monitoring, and serverless processing
- Documented test results, defect reports, and QA processes to maintain traceability and support smoother releases

PROJECTS

JSS

- Tested the Quiz feature, validating question rendering, scoring logic, timer/auto-submit behavior, randomization, and result calculation across different quiz configurations
- Tested the Project feature, verifying project creation, submission workflows, file/document uploads, status tracking, and grading/review flows
- Tested Test and Assignment modules, covering assignment creation, deadline handling, submission validation, resubmission scenarios, and evaluator/grader workflows
- Verified role-based access across features (student, instructor/admin) to ensure correct permissions for creating, submitting, and grading content
- Performed regression testing across quiz, project, test, and assessment modules after each release to catch cross-feature breakages
- Validated data accuracy in generated reports (scores, submission status, completion rates) against underlying database records
- Logged and tracked defects across all four modules, working with developers to reproduce, prioritize, and verify fixes

ICICIPRU

- Developed a robust Admin Dashboard for data management and monitoring, enabling real-time visibility into key operational metrics
- Optimized complex database queries powering the dashboard, improving data retrieval performance and reducing load times for large datasets
- Built and maintained RESTful APIs to support core backend operations, ensuring reliable data exchange between frontend and backend services
- Designed and implemented AWS Lambda functions for serverless backend processing, improving scalability and reducing infrastructure overhead
- Integrated PostgreSQL with backend services, handling schema design, query optimization, and data integrity for dashboard and reporting features
- Collaborated with cross-functional teams to translate monitoring and data management requirements into scalable backend solutions
- Monitored application performance post-deployment, identifying and resolving bottlenecks in query execution and API response times

EDUCATION

Mechanical Engineering – 7.75 CGPA **2018 - 2022**
Poojya Doddappa Appa college of engineering Kalaburagi

PUC - 74% **2018**
Nisarga PU college of science Kalaburagi

SSLC - 82 % **2016**
Nisarga PU college of science Kalaburagi
